

SMT manufacturing equipment is used to populate printed circuit boards (PCB) that use surface mount technology (SMT).

AV Tech

SMT manufacturing equipment is used to populate printed circuit boards (PCB) that use surface mount technology (SMT). This includes soldering machines, ovens, component placement, paste depositors and screens, and stencils. SMT manufacturing equipment enables PCB manufacturers to place more features on smaller boards without having to secure components with through-hole wire leads.

AV TECH is a professional PCB&PCBA OEM manufacturer, supplying PCB Production, Components Purchasing, SMT and function testing for companies at home and abroad.

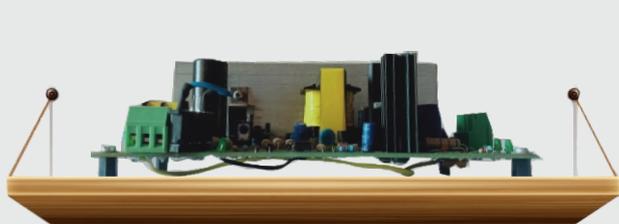

AV TECH was founded in 2014, we have our own PCB factory and PCBA factory, having passed the ISO9001, ISO13485, TS16949, UL(E332411).

We have advanced manufacturing equipment, leading technology level, excellent technical team, procurement team, quality engineering team and management team, professional hardware engineers and software engineers to provide pre-production, mid-production and post-production follow-up for customers' products. jobs.

AV TECH main markets are located in Europe, North America and South America and other countries and regions around the world. The main products are mainly consumer electronics, medical equipment, industrial control equipment, toys and other industries.

To think of what our customer think, set the quality as the core of our operation and pay close attention to our service towards the customer" is the principle of our enterprise. During the development of company, all of the staff are united to strive for a bright future. We are dedicated to create a company with first-class culture and first image.
